

Hi-Low[®] variable-height pocketed innerspring technology strategically positions coils of differing heights in the same row, providing configuration versatility that offers performance variety, design flexibility, and customisation potential.

- **Distinctive Feel** – Progressive chequerboard configuration with its initially soft – then supportive – comfort characteristics.
- **Customised Solutions** – Cavity-filled zoning opportunities that create space for micro-coil comfort layers such as NanoCoil[®] or other filling materials.
- **Responsive Support** – Pocketed innersprings help reduce partner disturbance and roll-together.
- **Quality Steel** – Leggett & Platt draws its own wire to ensure quality-controlled steel in every spring.
- **Packable and Shippable** – Can be compressed, folded, and rolled.

Hi-Low[®] variable-height pocket springs
