

# NANOCOIL® EDGE

Comfort Layer

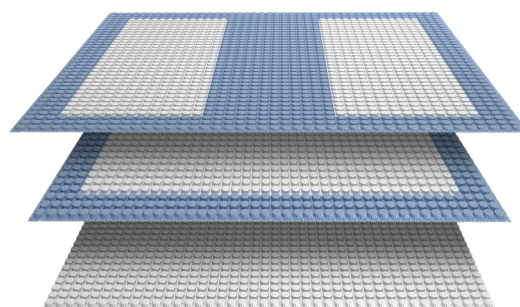

*Leggett & Platt®*

BeddingComponents-Intl.com

NanoCoil® Edge micro-coil comfort layers are versatile, responsive, and feature ActivEdge® for additional perimeter support. They enhance the sleep surface by increasing coil counts, improving air circulation, and delivering consistency and comfort life that's built to last.

- **ActivEdge®** – Transitions firmer perimeter support into the comfort layer, expanding the sleep surface and preventing roll-off.
- **Enhanced Air Circulation** – Creates a channel for air to flow in and out of the mattress, enabling the body to reach its desired temperature for achieving deep, restorative sleep.
- **Multiple Solutions** – Available in a number of specifications and configurations that are perfect for mattress topper, comfort layer, and filling-layer applications.
- **Sustainable Durability** – Glue-free construction that's designed to resist sagging, settlement, and body impressions.
- **Responsive Support** – Adjusts to body movements to isolate motion transfer and reduce partner disturbance.
- **Packable and Shippable** – Can be compressed, folded, and rolled.
